WanderGuard® BLUE Wander Management

SOLUTION OVERVIEW

Helping caregivers protect residents

SOLUTION BENEFITS

- **Contemporary design**
  Sleek components blend into the décor. The resident wearable is one of the smallest on the market.

- **Lower cost of ownership**
  Feature-rich components are wirelessly managed to simplify installation and day-to-day management.

- **Robust, scalable solution**
  Stand-alone exit protection or extended functionality to enable centralized alarm management and reporting.

- **UL294-compliant access**
  Enable staff or authorized visitors to pass through a controlled area using special codes or access cards.

- **Location-based alerts**
  Easily identify resident location. Geofencing virtual boundaries can be used to initiate alerts based on a resident's presence within the community.

CHALLENGES

Elopements are among the most serious safety concerns for senior living communities. The challenge lies in providing protection for residents at risk of wandering while preserving residents' dignity and mobility. Memory care requires discreet, versatile technology that meets the safety and security needs of both residents and staff.

SOLUTION

Whether protecting one door or an entire campus, WanderGuard BLUE provides peace of mind, removing the worry of a resident wandering into danger. With a legacy of success, WanderGuard BLUE is the most sophisticated—yet most simple—way to protect memory care residents against elopement risk.
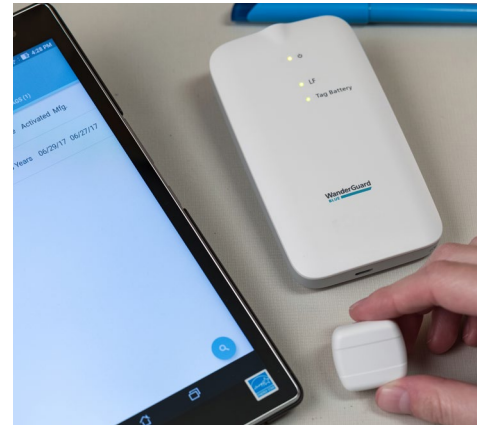

HOW IT WORKS

WanderGuard BLUE combines small and discreet resident bracelets and door components with streamlined design and simplified management. When a resident with a bracelet approaches a monitored door, the system alerts and the door locks when paired with optional magnetic door locks.

Advanced capabilities transform WanderGuard BLUE into a centralized alarm management and reporting solution, with the ability to manage daily wander management user activity from your desktop. Automatically identify resident location (based on tracking of supervised bracelets) with resident location clearly displayed on facility maps using the Arial® central management system. Geofencing creates virtual boundaries that can be used to initiate alerts based on a resident's presence and movement within the community.

"Securitas Healthcare's integrated WanderGuard® BLUE and Arial® solution empowers our caregivers with better tools to care for memory care residents. Providing location of residents and geofencing makes this wander protection solution ideal."
